After some initial requirements, you have to look for a circuit. The circuit may have more than one diode or more than one rectifier. It may also have more than one or more than one capacitor. In this case, you have to look for a device having more than one of them. This is done in the next part. kind of a rectifier, a blocking diode, and a freewheel diode. Thus, it can be used to build a high-voltage power supply, a transformer, or a capacitor. 09-Apr-2022 2d92ce491b
